

STATEMENT ON THE NON-PROFIT NATURE OF THE EXTUBE STUDY

The **EXTUBE** Study: **EX**tubation related complications - an international observational study **To**
Understand the impact and **BE**st practices in the operating room and intensive care unit

International, multicentre, prospective observational point prevalence study

I, Matteo Parotto, Principal Investigator of the EXTUBE Study,
DECLARE THAT

the EXTUBE Study is an international, multicentre, prospective observational point prevalence study
which aims to evaluate the incidence, risk factors, and outcomes of extubation-related complications and
describing clinical practices related to extubation;
no change in current diagnostic and therapeutical clinical practice will be made during the study; the study
does not involve the prescription of any interventions or drugs.
